

Gerva Gernewek Menystrans ha Negys:

A Cornish Language Lexicon
of Business and Management Terms

Edited by Andrew Climo and Viv Taskis

Introduction

We have offered up this lexicon for those who have a management or business background wishing to use precise, coherent and internally consistent terminology.

The prime reason for compiling this lexicon is that when writing specifically for managerial reporting it is crucial that the terms used relate to those found in international usage and, where possible are aligned with standards. Not only does this ensure that writing within this register is relatively free from the ambiguity and muddle that would arise if one attempted to write in it using 'standard register Cornish', but it also ensures that normal management and business practise can be conducted using the medium of Cornish without making excessive use of English or Anglo-American terms.

Whilst we would be delighted if users within mainstream Cornish would adopt the terms suggested here (and used by us), we are aware that many of the terms used here require some understanding of the concepts involved before they may be applied intelligently and may not be easily digested or put in context. We have therefore attempted to set out some of the terms in the 'concepts' section.

Some key standards

Some of the terms supplied here may seem to those unfamiliar with the concepts as superfluous or over-precise. However, in order to ensure that accepted industry standards are applied they have been fully listed in the lexicon. For the most part these terms are not disputed within management or finance.

A casual reader may be surprised to find that the terms *programme*, *project* and *plan* for example have been **disambiguated**. However, a moment's reflection shows that it is entirely unreasonable to render them all as **towl** or **towlen**: They are certainly not synonyms and, moreover are often used in the same sentence (how would one render *project and programme plan*).

This is just one example of very many where we have had to disambiguate terms to ensure that Cornish may be used within this register of the language.

We hope that we have been thorough and the terms we have set out are fully compatible with standards used by professional managers and business specialists.

The following source documents should be helpful for cross-referencing this publication:

- *PRINCE2*: The Project Management standard published by the *Office for Government Commerce* and which is the default project standard used within the UK
- Terminology used by the *Cornish Constitutional Convention* within their documents *Devolution for One and All*, and *Devolution for Prosperity*.

Explanations

Project life-cycles

Business change, IT and engineering projects follow a life-cycle of project stages (sometimes called 'phases') from feasibility through to implementation and operations. The following are our recommendations of how sequenced stages should be referred to (in the first example nouns are derived from the relevant verbs that describe a management activity).

Example 1 (Business Change or IT Project)

- | | |
|--------------------------------------|-----------------------------------|
| 1. Project Start Up | <i>Dalleth a Brojeta</i> |
| 2. Project Initiation | <i>Sordyans a Brojeta</i> |
| 3. Requirements Definition | <i>Definyans Reqwyrya</i> |
| 4. Prototyping | <i>Ragascoryans</i> |
| 5. Development | <i>Dysplegyans</i> |
| 6. Acceptance | <i>Ragemerans</i> |
| 7. Deployment | <i>Arayans</i> |
| 8. Project Closure | <i>Degeans a Brojeta</i> |
| 9. Post Implementation Review | <i>Post-Daswelans a'n Keweras</i> |

Example 2 (Engineering Project)

1. Concept	<i>Conceta</i>
2. Planning	<i>Towlednans</i>
3. Feasibility	<i>Hewilder</i>
4. Design	<i>Desin</i>
5. Development	<i>Dysplegyans</i>
6. Configuration	<i>Confygurans</i>
7. Test (Examination)	<i>Apposyans</i>
8. Manufacturing	<i>Gofwrians</i>
Production	<i>Ascoryans</i>
9. Assembly	<i>Assemblans</i>
10. Commissioning	<i>Cowlgemerans</i>
11. Handover	<i>Degemerans</i>
12. Operations	<i>Oberyans</i>

Work Breakdown Structure Levels

Programmes of work and projects are generally broken down into successively more detail, such that programmes, are broken down into projects, projects into sub-projects and/or work packages, which are then broken down into stages (phases), then activities and tasks.

Milestones and checkpoints are 'special' activities where project progress is measured (milestones being major activities, checkpoints being simple task-level reviews).

Programme	<i>Raglen</i>
L Project	<i>Projeta</i>
L Sub-Project	<i>Ys-projeta</i>
L Work Package	<i>Fardel ober</i>
L Phase, Stage	<i>Ajeth, Staj</i>
┆ Activity	<i>Gwrians</i>
L Milestone	<i>Merkven</i>
┆ Task	<i>Ober</i>
L Checkpoint	<i>Checkven</i>

Legislatures and Layers of Government

We have disambiguated the following terms as they are not synonymous:

Parliament	<i>Parlament</i>
Government	<i>Government</i> (See Note)
Assembly	<i>Senedh</i>
Council	<i>Consel</i>
Region	<i>Ranvro</i>
District	<i>Randir</i>

Note: We have disambiguated **government** and **governance**, since the first is an organisational entity and the second relates to the process of ensuring an organisation meets its obligations.

The Lexicon

absence *m.* cubmyas
acceptance criteria *m.* ragemerans meyn prof
acceptance (pre-handover) *m.* ragemerans
access codes *m.* codys acces
accord (political) *m.* acord
account balance *m.* kespos a'n acont
account *m.* acont
account *vb.* acontya
accountability *m.* acontasieth
accountable *a.* acontadow
accountancy (discipline) *m.* acontorieth
accounting (activity) *m.* acontyans
Act of Parliament *m.* Act a'n Parlament
activity *m.* gwrians
